

Product Overview

The **Wireline Cutter** is designed to **cut the wireline near the rope socket** when downhole tools become stuck and cannot be retrieved from the well. The cutter is lowered into the well under its own weight, guided by the wireline. Upon striking the rope socket of the stuck tool, it **cuts the wire and wedges the severed wire into its body**, allowing the **Wireline Cutter to be recovered together with the cut wire**.

Key Features

- Designed to safely cut the wireline when downhole tools become irretrievably stuck.
- Gravity-operated design runs down the wireline under its own weight.
- Cuts the wireline upon impact with the rope socket.
- Retains the cut wire by wedging it securely inside the cutter body.
- Retrieved together with the severed wire using standard wireline retrieval procedures.
- Available in multiple sizes to suit different well and wireline applications.
- Wire size must be specified when ordering.
- Additional sizes are available upon request.
