

Product Overview

Blanking Caps & Plugs are engineered to safely seal Quick Union connections during pressure testing, maintenance, transportation, and storage. They are designed with integrated NPT ports for installing pressure gauges and bleed-off valves, ensuring safe pressure monitoring and controlled depressurization. Compatible with all standard Quick Union connections, these components provide a reliable, leak-tight seal in demanding oilfield operations.

Key Features

- Precision-machined alloy steel construction
- Suitable for all standard Quick Union connections
- Integrated NPT port for pressure gauge or bleed-off valve installation
- Leak-tight sealing for safe isolation of pressurized equipment
- Corrosion-resistant finish for extended service life
- Easy installation and removal in field operations
- Available in multiple sizes and pressure ratings
- Manufactured to stringent oilfield quality standards

Applications

- Pressure testing of manifolds and piping systems
- Temporary isolation of pressure equipment
- Installation of pressure gauges
- Controlled bleed-off of trapped pressure
- Equipment maintenance and servicing
- Protection of Quick Union connections during transportation and storage
