

Product Overview

The **Hydrostatic Bailer** is designed to **remove debris that has accumulated on top of subsurface equipment**, enabling recovery when conventional wireline operations are unsuccessful. It is specifically used in situations where **debris cannot be effectively removed with a sand pump bailer**, making it a reliable solution for challenging well-cleaning and recovery operations.

Key Features

- Removes debris accumulated above subsurface equipment.
- Assists in the recovery of downhole equipment when regular wireline methods are ineffective.
- Intended for applications where **sand pump bailers cannot remove the debris**.
- Available in multiple sizes to accommodate different wellbore and operational requirements.
- Robust construction with industry-standard top connections for compatibility with wireline tool strings..
