

Product Overview

A **Releasable Overshot** is used to retrieve a **fish** lost in the well that does not have a conventional fishing neck or has a damaged fishing neck. The tool operates by applying the weight of the tool string onto the fish, allowing the **slips** to expand around it. When the tool string is lifted, the slips engage the fish for retrieval. Unlike conventional overshot, the slips of a releasable overshot can be **released by downward jarring**, allowing the tool to disengage from the fish if necessary.

Key Features

- Retrieves fish with damaged or no conventional fishing neck.
- Operates using an expanding **slip mechanism** activated by tool string weight.
- Securely grip the fish when the tool string is lifted.
- **Releasable design** allows disengagement by **downward jarring**.
- Available in multiple sizes with different slip ranges to suit various fishing applications.
