

Product Overview

The **Side Wall Cutter** is a wireline intervention tool designed to **cut the wireline at any desired point within the tubing string**. It can also be deployed to the **rope socket of a tool string that has become stuck in the well**, enabling safe recovery operations. The **Side Wall Cutter Running Tool** is used to convey the cutter to the required depth, ensuring accurate positioning before the cutting operation is performed.

Key Features

- Cuts wireline at any selected point in the tubing string.
- Suitable for freeing stuck wireline tool strings.
- Can be run to the rope socket of a stuck tool string.
- Operated using a dedicated Side Wall Cutter Running Tool.
- Reliable cutting mechanism for wireline recovery operations.
- Available in multiple sizes to suit various tubing diameters.
