

Product Overview

The **Bow Spring Centralizer** is a wireline tool string accessory designed to centralize slickline tool strings while running gauges into **tail pipe assemblies ranging from 2 in. through 4 in. I.D.** by maintaining the tool string in the center of the tubing, it improves gauge alignment, minimizes contact with the tubing wall, and helps ensure smooth and reliable deployment during well intervention operations.

Key Features

- Designed for slickline tool strings
- Centralizes gauges during deployment
- Suitable for tail pipe assemblies from **2 in. to 4 in. I.D.**
- Bow spring design provides positive centering
- High-strength spring steel bows
- Precision-ground fishing neck
- Standard wireline thread connections
- Compact and lightweight construction
