

Product Overview

The **Center Spear** is an internal fishing tool designed to **engage and retrieve fish with a smooth internal bore**, such as tubing, drill pipe, and other tubular equipment left in the well. The spear is lowered into the bore of the fish, where its hardened slips expand and securely grip the internal wall. As an upward pull is applied, the slips tighten their grip, enabling the fish to recover safely to the surface. The Center Spear provides a dependable and efficient solution for a wide range of wireline and workover fishing operations.

Key Features

- Internal fishing tool for smooth bore tubulars
- Self-energizing slip gripping mechanism
- High-strength alloy steel construction
- Heat-treated gripping slips
