

Product Overview

The **Wireline Retriever** is a wireline fishing tool designed to **locate, engage, and retrieve a broken wireline** from the wellbore. During fishing operations, the retriever fingers press against the tubing wall to locate the top of the broken wireline and guide it into the tool. As the tool string is pulled upward, the internal taper grips the wireline securely, allowing it to be recovered to the surface. The tool is available with **Slotted** or **Plain** guide types to suit different tubing sizes and operating conditions.

Key Features

- Designed for broken wireline recovery
- Locates and captures the top of the broken wireline
- Internal taper securely grips the wireline
- Available with **Slotted** or **Plain** guide types
- High-strength alloy steel construction
