

Product Overview

The **Wireline Wirefinder** is a specialized fishing tool used during **wireline fishing operations** to locate and ball the upper end of a broken wireline inside the tubing. After locating the broken wire (indicated by a weight loss), the tool is lowered slightly to ball the broken wire in the wellbore. The balled wire can then be engaged by a **Wireline Grab** and retrieved to the surface, making it an essential tool for wireline recovery operations.

Key Features

- Locates the upper end of broken wireline
- Designed for wireline fishing operations
- Forms (balls) the broken wire for retrieval
- High-strength alloy steel construction
- Precision-machined locating profile
