

## Product Overview

The **Impression Block** is a diagnostic fishing tool used during wireline fishing operations to determine the **shape, size, and condition of the top of the fish**. By creating an impression of the fish profile, it enables operators to accurately identify the obstruction and select the most appropriate fishing tool for successful retrieval. Its simple, rugged design makes it an essential component for efficient and reliable fishing operations.

## Key Features

- Used to determine the shape and size of the top of the fish before retrieval.
- Assist in selecting the most appropriate fishing tool for the operation.
- Provides a clear impression of the fish profile for accurate assessment.
- Improves the efficiency and success rate of wireline fishing operations.

## Technical Data

| O.D. Range (in.) | F/N O.D. (in.) | Top Connection |
|------------------|----------------|----------------|
| 1.000 – 1.230    | 0.875          | 5/8 - 11 UNC   |
| 1.375 – 1.410    | 1.187          | 15/16 - 10 UN  |
| 1.750 – 2.250    | 1.375          | 15/16 - 10 UN  |
| 2.625 – 2.812    | 1.750          | 1-1/16 - 10 UN |
| 3.500 – 4.625    | 2.312          | 1-9/16 - 10 UN |
| 5.500 – 5.750    | 2.312          | 1-9/16 - 10 UN |
