

Product Overview

The **Wireline Fishing Magnet** is designed to recover **small metallic objects, loose metal fragments, and metallic scale** from the top of downhole tools during wireline fishing operations. Its high-strength magnetic assembly provides an efficient and reliable method of retrieving ferrous debris that cannot be recovered by conventional mechanical fishing tools. The compact, robust design allows easy deployment through the wireline toolstring, helping minimize non-productive time and improve the success of downhole fishing operations.

Key Features

- High-strength magnetic assembly for efficient retrieval of ferrous objects.
- Designed to recover small metal fragments from the top of downhole tools.
- Effective for retrieving metallic scale and loose debris.
- Compact and rugged construction for reliable downhole performance.
