

Product Overview

Hydraulic Tool Catchers are safety devices designed to catch the tool string when it is pulled too quickly into the top of the lubricator, and the wire is stripped from the rope socket. The tool catcher engages the uppermost fishing neck and prevents the loss of the tool string into the well bore. The hydraulic tool catcher is designed to be **fail-safe**, as it is permanently in the caught position and requires hydraulic pressure to release.

Type	Fishing Neck Size
Hydraulic Tool Catcher	1.00" to 2.313"
Multi-Catch Option	1.00" to 1.750"
Multi-Catch Option	1.375" to 2.313"
